

EPTA FOOD DEFENCE: FOR TOTAL PROTECTION

Epta launched **Epta Food Defence**, the innovative anti-bacterial system for refrigerated cold rooms harnesses silver ions, and is **available for all Misa's solutions**. Epta Food Defence has been designed to improve the safety of food stored in cold rooms, and is able to **prevent, counteract and eliminate a number of species of bacteria**, including the best-known and most dangerous types. The anti-bacterial properties are actually applied to the sheet metal used to make the Misa cold room. The result is total, round-the-clock **permanent protection** which lasts for the entire lifecycle of the product, seven days a week.

Lastly, the protective film is suitable for contact with food substances and personal use, in compliance with the Ministerial Decree dated 21 March 1973 and subsequent amendments, as well as European Directives 78/142/EEC, 80/766/EEC, 82/711/EEC, 85/572/EEC, 90/128/EEC and 92/ EEC.
